

DEEPIKA ANIL KUMAR CHATURVEDI

Java Backend Engineer • Spring Boot • Microservices • Distributed Systems
Dallas, TX • deepikachatur97@gmail.com • (469) 237-5242 • [LinkedIn](#)

PROFESSIONAL SUMMARY

Full-Stack Java Engineer with 4+ years building event-driven pipelines and backend services across financial services, healthcare, and telecom. Track record of measurable performance and reliability improvements using Java/Spring Boot, NiFi, PostgreSQL, Snowflake, and React.

TECHNICAL SKILLS

Languages & Frameworks: Java, Spring Boot, REST APIs, React, Microservices

Messaging & Data: Apache NiFi, Apache Kafka, PostgreSQL, Snowflake

DevOps & Testing: Docker, Kubernetes, Jenkins, CI/CD, Maven, JUnit, Mockito, TestContainers, Git

PROFESSIONAL EXPERIENCE

Goldman Sachs (Insight Global)

Software Engineer (Contract) | Dallas, TX | Sep 2024 – Present

- Delivered a supervisory exception-management dashboard (React + Spring Boot) used daily by ~50 risk and compliance staff to triage flagged trading exceptions, in addition to the existing email workflow.
- Owned a NiFi-based real-time control pipeline (~14M events/day) that validates incoming transactions, flags exceptions against supervisory rules, and routes them to the appropriate downstream workflows and escalation contacts for review.
- Cut per-event processing latency from ~2s to under 200ms by replacing an external validation API with a custom in-pipeline Java NiFi processor, removing an inter-team dependency and an additional call over the wire.

Treatment24Seven

Full-Stack Engineer | Remote | Jun 2022 – Jan 2024

- Diagnosed slow appointment-scheduling queries using EXPLAIN ANALYZE and added composite indexes on high-traffic tables, cutting API latency from ~450ms to ~120ms.
- Reduced doctor dashboard update delay from 5–10 seconds to near-real-time by replacing periodic polling with Server-Sent Events for patient status updates.
- Stood up a service-health dashboard that aggregated Spring Boot Actuator endpoints with Slack alerting on failure, reducing incident detection from hours to minutes.

Amdocs (Client: AT&T)

Java Backend Engineer | Pune, India | Jan 2020 – Aug 2021

- Developed REST APIs for invoicing workflows and managed database schema changes using Liquibase as part of AT&T's billing platform migration from monolith to Spring Boot microservices.
- Sped up month-end billing settlement runs by introducing parallel batch processing for settlement jobs.

EDUCATION

M.S. in Computer Science — University of Texas at Dallas | Aug 2021 – May 2023

B.E. in Computer Science — Pune University | Jun 2015 – May 2019
